Received 5 September 2023; Revised 2 December 2023; Accepted 14 December 2023

#### Abstract

A picture fuzzy set is one of the generalizations of Atanassove's (IFSs) fuzzy set. Under this environment, in this manuscript, we familiarize a new type of extensions of fuzzy sets called cubic root fuzzy sets (briefly, $\sqrt[3]{ }$--Fuzzy sets) and Fermatean fuzzy sets to contrast $(3,3, \sqrt[3]{\cdot})$-picture sets. We introduce the notion of $(3,3, \sqrt[3]{ })$ - picture fuzzy $B C C$-ideals of $B C C$-algebras. After then, we study the homomorphic image and inverse image of $(3,3, \sqrt[3]{ })$-picture fuzzy $B C C$-ideals under homomorphism of $B C C$-algebras. Moreover, the Cartesian product of ( $3,3, \sqrt[3]{\cdot}$ )-picture fuzzy $B C C$ - ideals of $B C C$-algebras is given. Finally, we introduce the concept of correlation for $(3,3, \sqrt[3]{ })$-picture fuzzy sets, which is a new extension of the correlation of Atanassove's IFSs and investigated several properties.

## 1. Introduction

In 1978, Iséki and Tanaka [1] introduced the notion of $B C K$-algebras. Iséki [2] introduced the concept of a $B C I$-algebra which is a generalization of $B C K$-algebra. Since then, numerous mathematical papers have been written investigating the algebraic properties of $B C K / B C I$-algebras and their relationship with other structures including lattices and Boolean algebras. There is a great deal of literature which has been produced on the theory of $B C K / B C I$-algebras. In particular, the emphasis
seems to have been put on the ideal theory of $B C K / B C I$-algebras. Iséki posed an interesting problem (solved by Wron ski [3]) whether the class of $B C K$-algebras is a variety. In connection with this problem, Komori [4] introduced a notion of $B C C$ algebras, and Dudek [5] redefined the concept of $B C C$-algebras by using a dual form of the ordinary definition in the sense of Komori. In [6], Dudek and Zhang introduced the notion of $B C C$-ideals of $B C C$-algebras and described connections between such ideals and congruences. In 1956, Zadeh [7] introduced the concept of fuzzy sets. At present, this concept has been applied to many mathematical branches. The idea of "intuitionistic fuzzy set" was first published by Atanassov [8] as a generalization of the notion of fuzzy sets. In 1991, Xi [9] applied fuzzy sets to $B C I, B C K, M V$-algebras. Dudek and Jun [10] considered the fuzzification of $B C C$-ideals of $B C C$-algebras. In 2013, including the measure of neutral membership and generalizing the notion of intuitionistic fuzzy set, the concept of picture fuzzy set was initiated by Cuong [11] (See [12, 13] for further research). After the initiation of the picture fuzzy set, different types of research works in the context of picture fuzzy set. Yager $[14,15]$ put forward the concept of Pythagorean fuzzy sets which is a generalization of intuitionistic fuzzy sets, and it is a more powerful tool to solve uncertain problems. Ibrahim et al. [16] defined a new generalization of Pythagorean fuzzy sets called $(3 ; 2)$-fuzzy sets. The main advantage of $(3 ; 2)$-fuzzy sets is that they can characterize more vague cases than Pythagorean fuzzy sets, which can be exploited in many decision-making problems. In 2019, Senapati et al. [17] initiated Fermatean fuzzy sets. Fermatean fuzzy set is characterized by membership and non membership grade restricted that cube sum of its membership grade and non membership grade is less than or equal to one. Correlation coefficient is one of the hot research topics in IFS theory, and it has received a lot of attention from various researchers (See [18, 19, 20, 21, 22, 23, 24]). It is widely used in statistical analysis and engineering sciences. For instance, Gerstenkorn and Manko [18] introduced the correlation coefficients of Atanassove's IFSs. In this paper, we introduce the notion of $(3,3, \sqrt[3]{\cdot})$-picture fuzzy $B C C$-ideals of $B C C$-algebras and we study the homomorphic image and inverse image of $(3,3, \sqrt[3]{\cdot})$-picture fuzzy $B C C$ ideals under a homomorphism of $B C C$-algebras. Moreover, the Cartesian product of $(3,3, \sqrt[3]{\cdot})$-picture fuzzy $B C C$-ideal of $B C C$-algebras is given. Finally, we introduce the concept of correlation for $(3,3, \sqrt[3]{\cdot})$-picture fuzzy sets, which is a new extension of the correlation of Atanassove's IFSs and investigated several properties.

## 2. Preliminaries

Now we review some definitions and properties that will be useful in our results.
Definition 2.1 (See [5, 25, 26]). An algebra system ( $X, *, 0$ ) of type $(2,0)$ is called
a $B C C$-algebra, if it satisfies the following axioms: for any $x, y, z \in X$,
$\left(\mathrm{BCC}_{1}\right)[(x * y) *(z * y)] *(x * z)=0$,
$\left(\mathrm{BCC}_{2}\right) x * 0=x$,
$\left(\mathrm{BCC}_{3}\right) x * x=0$,
$\left(\mathrm{BCC}_{4}\right) 0 * x=0$,
$\left(\mathrm{BCC}_{5}\right) x * y=0$ and $y * x=0$ imply $x=y$.

On a $B C C$-algebra $X$, we can define a partial order $\leq$ on $X$ by: for any $x, y \in X$,

$$
x \leq y \Leftrightarrow x * y=0
$$

Any $B C K$-algebra is a $B C C$-algebra, but there are $B C C$-algebras which are not $B C K$-algebras (See Dudek [25]). Note that a $B C C$-algebra is a $B C K$-algebra if and only if

$$
(x * y) * z=(x * z) * y \text { for any } x, y, z \in X
$$

In what follows, $X$ will denote a $B C C$-algebra unless otherwise specified.
Result 2.2 (See [25]). The followings hold: for any $x, y, z \in X$,
(1) $(x * y) * x=0$,
(2) $x \leq y$ implies $x * z \leq y * z$,
(3) $x \leq y$ implies $z * y \leq z * x$,
(4) $(x * y) *(z * y) \leq x * z$.

For any $x, y \in X$, we denote $x \wedge y=y *(y * x)$.
We will refer to is a $K U$-algebra unless otherwise indicated.
Definition 2.3 ([25]). Let $I$ be a nonempty subset of $X$. Then $I$ is called an $B C K$-ideal of $X$, if it satisfies the following axioms: for any $x, y \in X$,
$\left(\mathrm{BCKI}_{1}\right) 0 \in I$,
$\left(\mathrm{BCKI}_{2}\right) x * y, y \in I$ imply $x \in I$.
Definition 2.4 ([25]). Let $I$ be a nonempty subset of $X$. Then $I$ is called an $B C C$-ideal of $X$, if it satisfies the following axioms: for any $x, y, z \in X$,
$\left(\mathrm{BCCI}_{1}\right) 0 \in I$,
$\left(\mathrm{BCCI}_{2}\right)(x * y) * z, y \in I$ imply $x * z \in I$.
Example 2.5 (See [5]). Let $X=\{0,1,2,3\}$ be a in which the operation $*$ is defined as follows:

| $*$ | 0 | 1 | 2 | 3 |
| :---: | :---: | :---: | :---: | :---: |
| 0 | 0 | 0 | 0 | 0 |
| 1 | 1 | 0 | 1 | 0 |
| 2 | 2 | 2 | 0 | 0 |
| 3 | 3 | 3 | 1 | 0 |

Table 2.1
Then we can easily check that $(X, *, 0)$ is a $B C C$-algebra.
Definition 2.6 (See[8]). Let $X$ be a nonempty set of $X$. Then a mapping $A=$ $\left(A^{\in}, A^{\notin}\right) X \rightarrow[0,1] \times[0,1]$ is called an intuitionistic fuzzy set (briefly, IFS) in $X$, if $0 \leq A^{\in}(x)+A^{\notin}(x)$ for each $x \in X$. In this case, $A^{\epsilon}(x)$ [resp. $\left.A^{\notin}(x)\right]$ is called the degree of membership [resp. nonmembership] of $A$ at $x \in X$.

Definition 2.7 ( $[11,12]$ ). Let $X$ be a nonempty universe set. Then a mapping $A=\left\langle A_{P}, A_{I}, A_{N}\right\rangle: X \rightarrow[0,1] \times[0,1] \times[0,1]$ is called a picture fuzzy set (briefly, PFS) in $X$, if $0 \leq A_{P}(x)+A_{I}(x)+A_{N}(x) \leq 1$ for each $x \in X$. In this case, $A_{P}(x)$ [resp. $A_{I}(x)$ and $A_{N}(x)$ ] is called the positive-membership [resp. the neutralmembership and the negativ-emembership] degree of $A$ at $x \in X$.

Definition 2.8. Let $X$ be a nonempty set and let $A=\left(A^{\in}, A^{\notin}\right): X \rightarrow[0,1] \times[0,1]$ be a mapping. Then $A$ is called:
(i) a Pythagorean fuzzy set in $X$ (See [14]), if $0 \leq A^{\in^{2}}(x)+A^{\not{ }^{2}}(x) \leq 1$ for each $x \in X$,
(ii) an $n$-Pythagorean fuzzy set in $X$ (See [27]), if $0 \leq A^{\in^{n}}(x)+A^{\not{ }^{n}}(x) \leq 1$ for each $x \in X$,
(iii) a Fermatean fuzzy set in $X$ (See [17]), if $0 \leq A^{\in^{3}}(x)+A^{\not{ }^{3}}(x) \leq 1$ for each $x \in X$,
(iv) a (3;2)-fuzzy set in $X$ (See [16, 28, 29]), if $0 \leq A^{\in^{3}}(x)+A^{\nexists^{2}}(x) \leq 1$ for each $x \in X$,
(v) an ( $n ; m$ )-fuzzy set in $X$ (See [29]), if $0 \leq A^{\in n}(x)+A^{\not{ }^{m}}(x) \leq 1$ for each $x \in X$,
(vi) an $S R$-fuzzy set in $X$ (See [30]), if $0 \leq A^{\in^{2}}(x)+\sqrt{A^{\notin(x)}} \leq 1$ for each $x \in X$, (vii) a $C R$-fuzzy set in $X$ (See [31]), if $0 \leq A^{\in 3}(x)+\sqrt[3]{A^{\notin(x)}} \leq 1$ for each $x \in X$.

## 3. $(3,3, \sqrt[3]{\cdot})$-PICTURE FUZZY $B C C$-IDEALS OF $B C C$-algebras

First of all, we introduce a new notion called $(3,3, \sqrt[3]{ })$-picture fuzzy set in a nonempty set $X$ and study some of its properties. Next, we propose the concepts of subalgebras and ideals of $B C C$-algebras and deal with some of their properties.
Definition 3.1. Let $X$ be a nonempty set. Then a mapping $\bar{A}=\left\langle A_{P}, A_{I}, A_{N}\right\rangle$ : $X \rightarrow[0,1] \times[0,1] \times[0,1]$ is called a $(3,3, \sqrt[3]{\cdot})$-picture fuzzy set in $X$ (briefly, $(3,3, \sqrt[3]{\cdot})$ PFS), if $0 \leq A_{p}^{3}(x)+A_{I}^{3}(x)+\sqrt[3]{A_{N}(x)} \leq 1$ for each $x \in X$. The whole [resp. empty] $(3,3, \sqrt[3]{ })$-picture fuzzy set in $X$, denoted by $\overline{1}$ [resp. $\overline{0}]$, is a $(3,3, \sqrt[3]{\cdot})$-picture fuzzy set in $X$ defined as follows: for each $x \in X$,

$$
\overline{1}(x)=\langle 1,0,0\rangle[\operatorname{resp} . \overline{0}(x)=\langle 0,0,1\rangle] .
$$

We will denote the set of all $(3,3, \sqrt[3]{\cdot})$-PFSs in $X$ as $P F S_{(3,3, \sqrt[3]{)})}(X)$.
Example 3.2. Let $X=\{0, a, b, c, d\}$ be a reference set in which the picture fuzzy set $A=\left\langle A_{P}, A_{I}, A_{N}\right\rangle$ is given by the following table:

| $X$ | 0 | $a$ | $b$ | $c$ | $d$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $A_{P}(x)$ | 0.4 | 0.3 | 0.3 | 0.2 | 0.1 |
| $A_{I}(x)$ | 0.1 | 0.1 | 0.2 | 0.2 | 0.3 |
| $A_{N}(x)$ | 0.006 | 0.004 | 0.002 | 0.001 | 0.001 |
| Table 3.1 |  |  |  |  |  |

Then we obtain the $(3,3, \sqrt[3]{\cdot})$-PFS $\bar{A}$ in $X$ given by the following table:

| $X$ | 0 | $a$ | $b$ | $c$ | $d$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $A_{P}^{3}(x)$ | 0.064 | 0.027 | 0.027 | 0.008 | 0.001 |
| $A_{I}^{3}(x)$ | 0.001 | 0.001 | 0.008 | 0.008 | 0.027 |
| $\sqrt[3]{A_{N}(x)}$ | 0.182 | 0.159 | 0.126 | 0.1 | 0.1 |
| Table 3.2 |  |  |  |  |  |

Definition 3.3. Let $X$ be a nonempty set and let $\bar{A}, \bar{B} \in P F S_{(3,3,3,5)}(X)$. Then the inclusion $\bar{A} \subset \bar{B}$ and the equality $\bar{A}=\bar{B}$ as follows:
(i) $\bar{A} \subset \bar{B}$ iff $A_{P}^{3}(x) \leq B_{P}^{3}(x), A_{I}^{3}(x) \geq B_{I}^{3}(x), \sqrt[3]{A_{N}(x)} \leq \sqrt[3]{B_{N}(x)}$ for each $x \in X$,
(ii) $\bar{A}=\bar{B}$ iff $\bar{A} \subset \bar{B}, \bar{B} \subset \bar{A}$.

Definition 3.4. Let $X$ be a nonempty set, let $\bar{A}, \bar{B} \in P F S_{(3,3,3,3)}(X)$ and let $\left(\bar{A}_{j}\right)_{j \in J} \subset P F S_{(3,3,3, \cdot)}(X)$, where $J$ denotes an index set. Then the complement $\bar{A}^{c}=\left\langle A_{P}^{c}, A_{I}^{c}, A_{N}^{c}\right\rangle$ of $\bar{A}$, the intersection $\bar{A} \cap \bar{B}$ and the union $\bar{A} \cup \bar{B}$ of $\bar{A}$ and $\bar{B}$, the intersection $\bigcap_{j \in J} \bar{A}_{j}$ and the union $\bigcup_{j \in J} \bar{A}_{j}$ of $\left(\bar{A}_{j}\right)_{j \in J}$ are $(3,3, \sqrt[3]{\cdot})$-PFSs in $X$ defined respectively as follows: for each $x \in X$,
(i) $\bar{A}^{c}(x)=\left\langle 1-A_{N}(x), 1-A_{I}(x), 1-A_{P}(x)\right\rangle$,
(ii) $(\bar{A} \cap \bar{B})(x)=\left\langle\left(A_{P} \cap B_{P}\right)(x),\left(A_{I} \cup B_{I}\right)(x),\left(A_{N} \cap B_{N}\right)(x)\right\rangle$, where

$$
\begin{aligned}
& \left(A_{P} \cap B_{P}\right)^{3}(x)=A_{P}^{3}(x) \wedge B_{P}^{3}(x),\left(A_{I} \cup B_{I}\right)^{3}(x)=A_{I}^{3}(x) \vee B_{I}^{3}(x), \\
& \sqrt[3]{\left(A_{N} \cap B_{N}\right)(x)}=\sqrt[3]{A_{N}(x)} \wedge \sqrt[3]{B_{N}(x)},
\end{aligned}
$$

(iii) $(\bar{A} \cup \bar{B})(x)=\left\langle\left(A_{P} \cup B_{P}\right)(x),\left(A_{I} \cap B_{I}\right)(x),\left(A_{N} \cup B_{N}\right)(x)\right\rangle$, where $\left(A_{P} \cup B_{P}\right)^{3}(x)=A_{P}^{3}(x) \vee B_{P}^{3}(x),\left(A_{I} \cap B_{I}\right)^{3}(x)=A_{I}^{3}(x) \wedge B_{I}^{3}(x)$, $\sqrt[3]{\left(A_{N} \cup B_{N}\right)(x)}=\sqrt[3]{A_{N}(x)} \vee \sqrt[3]{B_{N}(x)}$,
(iv) $\left(\bigcap_{j \in J} \bar{A}_{j}\right)(x)=\left\langle\left(\bigcap_{j \in J} A_{P, j}\right)(x),\left(\bigcup_{j \in J} A_{I, j}\right)(x),\left(\bigcap_{j \in J} A_{N, j}\right)(x)\right\rangle$, where $\left(\bigcap_{j \in J} A_{P, j}\right)^{3}(x)=\bigwedge_{j \in J} A_{P, j}^{3}(x),\left(\bigcup_{j \in J} A_{I, j}\right)^{3}(x)=\bigvee_{j \in J} A_{I, j}^{3}(x)$,
$\sqrt[3]{\left(\bigcap_{j \in J} A_{N, j}\right)(x)}=\bigwedge_{j \in J} \sqrt[3]{A_{N, j}(x)}$,
(v) $\left(\bigcup_{j \in J} \bar{A}_{j}\right)(x)=\left\langle\left(\bigcup_{j \in J} A_{P, j}\right)(x),\left(\bigcap_{j \in J} A_{I, j}\right)(x),\left(\bigcup_{j \in J} A_{N, j}\right)(x)\right\rangle$, where $\left(\bigcup_{j \in J} A_{P, j}\right)^{3}(x)=\bigvee_{j \in J} A_{P, j}^{3}(x),\left(\bigcap_{j \in J} A_{I, j}\right)^{3}(x)=\bigwedge_{j \in J} A_{I, j}^{3}(x)$, $\sqrt[3]{\left(\bigcup_{j \in J} A_{N, j}\right)(x)}=\bigvee_{j \in J} \sqrt[3]{A_{N, j}(x)}$.

Proposition 3.5. Let $X$ be a nonempty set, let $\bar{A} \in P F S_{(3,3,3,5)}(X)$ and let $C(\bar{A})=$ $\left\langle C\left(A_{P}\right), C\left(A_{I}\right), C\left(A_{N}\right)\right\rangle$ be defined by: for each $x \in X$,

$$
\begin{gathered}
C\left(A_{P}\right)(x)=A_{N}(x), C\left(A_{N}\right)(x)=A_{P}(x) \\
C\left(A_{I}\right)(x)=\sqrt[3]{1-\left(\sqrt[3]{A_{P}(x)}+A_{N}^{3}(x)+\sqrt[3]{A_{N}(x)}\right)}
\end{gathered}
$$

Then $C(\bar{A}) \in P F S_{(3,3,3,3)}(X)$.
Proof. Let $x \in X$. Then we have

$$
\begin{aligned}
& C\left(A_{P}\right)^{3}(x)+C\left(A_{I}\right)^{3}(x)+\sqrt[3]{C\left(A_{N}\right)(x)} \\
= & A_{N}^{3}(x)+\left(1-\left(\sqrt[3]{A_{P}(x)}+A_{N}^{3}(x)+\sqrt[3]{A_{N}(x)}\right)\right)+\sqrt[3]{A_{P}(x)} \\
= & 1-\sqrt[3]{A_{N}(x)} .
\end{aligned}
$$

Since $0 \leq 1-\sqrt[3]{A_{N}(x)} \leq 1,0 \leq C\left(A_{P}\right)^{3}(x)+C\left(A_{I}\right)^{3}(x)+\sqrt[3]{C\left(A_{N}\right)(x)} \leq 1$. Thus $C(\bar{A}) \in P F S_{(3,3,3,3)}(X)$.

The following is an immediate consequence of Definition 3.4.
Lemma 3.6. Let $X$ be a nonempty sets and let $\bar{A}, \bar{B}, \bar{B} \in P F S_{(3,3, \sqrt[3]{)})}(X)$. Then
(1) $\bar{A} \cap \bar{A}=\bar{A}, \bar{A} \cup \bar{A}=\bar{A}$,
(2) $\bar{A} \cap \bar{B}=\bar{B} \cap \bar{A}, \bar{A} \cup \bar{B}=\bar{B} \cup \bar{A}$,
(3) $(\bar{A} \cap \bar{B}) \cap \bar{C}=\bar{A} \cap(\bar{B} \cap \bar{C}),(\bar{A} \cup \bar{B}) \cup \bar{C}=\bar{A} \cup(\bar{B} \cup \bar{C})$,
(4) $\bar{A} \cap \bar{B}) \cup \bar{C}=(\bar{A} \cup \bar{C}) \cap(\bar{B} \cup \bar{C}), \bar{A} \cup \bar{B}) \cap \bar{C}=(\bar{A} \cap \bar{C}) \cup(\bar{B} \cap \bar{C})$,
(5) $(\bar{A} \cap \bar{B})^{c}=\bar{A}^{c} \cup \bar{B}^{c},(\bar{A} \cup \bar{B})^{c}=\bar{A}^{c} \cap \bar{B}^{c}$,
(6) $\left(\bar{A}^{c}\right)^{c}=\bar{A}$,
(7) $\bar{A} \cap \bar{A}^{c} \neq \overline{0}, \bar{A} \cup \bar{A}^{c} \neq \overline{1}$ in general (See Example 3.7).

Example 3.7. Consider $\bar{A}=\left\langle A_{P}, A_{I}, A_{N}\right\rangle=\langle 0.04,0.2,0.006\rangle \in P F S_{(3,3, \sqrt[3]{7})}(X)$.
Then clearly, $\bar{A}^{c}=\langle 0.994,0.8,0.96\rangle$. Thus we have: for each $x \in X$,

$$
\begin{gathered}
\left(A_{P} \cup A_{P}^{c}\right)^{3}(x)=0.04^{3} \vee 0.994^{3}=0.997 \neq 1 \\
\left(A_{P} \cap A_{P}^{c}\right)^{3}(x)=0.04^{3} \wedge 0.994^{3}=0.000064 \neq 0
\end{gathered}
$$

So $A_{P} \cup A_{P}^{c} \neq \overline{1}, A_{P} \cap A_{P}^{c} \neq \overline{0}$.
Definition 3.8. Let $\bar{A}$ be a $(3,3, \sqrt[3]{\cdot})$-PFS in a $B C C$-algebra $X$. Then $\bar{A}$ is called a $(3,3, \sqrt[3]{\cdot})$-picture fuzzy subalgebra (briefly, $(3,3, \sqrt[3]{\cdot})$-PFSA) of $X$, if it satisfies the following conditions: for any $x, y \in X$,
$\left(\mathrm{PFSA}_{1}\right) A_{P}^{3}(x * y) \geq A_{P}^{3}(x) \wedge A_{P}^{3}(y)$,
$\left(\mathrm{PFSA}_{2}\right) A_{I}^{3}(x * y) \leq A_{I}^{3}(x) \vee A_{I}^{3}(y)$,
$\left(\mathrm{PFSA}_{2}\right) \sqrt[3]{A_{N}(x * y)} \geq \sqrt[3]{A_{N}(x)} \wedge \sqrt[3]{A_{N}(y)}$.
Example 3.9. Let $X=\{0,1,2,3\}$ be a set with the binary operation $*$ defined by the following table:

\[

\]

Then we can easily check that $(X, *, 0)$ is a $B C C$-algebra. Define $A_{P}, A_{I}, A_{N}$ as the following table:

| $X$ | 0 | 1 | 2 | 3 |
| :---: | :---: | :---: | :---: | :---: |
| $A_{P}(x)$ | 0.04 | 0.03 | 0.02 | 0.01 |
| $A_{I}(x)$ | 0.02 | 0.02 | 0.02 | 0.01 |
| $A_{N}(x)$ | 0.006 | 0.004 | 0.002 | 0.001 |

Table 3.4
Then we obtain the following table:
Thus we can easily see that $\bar{A}=\left\langle A_{P}, A_{I}, A_{N}\right\rangle$ is a $(3,3, \sqrt[3]{\cdot})$-PFSA of $X$.

| $X$ | 0 | 1 | 2 | 3 |
| :---: | :---: | :---: | :---: | :---: |
| $A_{p}^{3}(x)$ | 0.064 | 0.027 | 0.008 | 0.001 |
| $A_{I}^{3}(x)$ | 0.008 | 0.008 | 0.027 | 0.027 |
| $\sqrt[3]{A_{N}(x)}$ | 0.1817 | 0.1587 | 0.1260 | 0.1 |

Table 3.5
Lemma 3.10. If $\bar{A}=\left\langle A_{P}, A_{I}, A_{N}\right\rangle$ is a $\left(3,3, \sqrt[3]{{ }^{\prime}}\right)$-PFSA of a $B C C$-algebra $X$, then the following inequalities hold: for each $x \in X$,

$$
A_{P}^{3}(0) \geq A_{P}^{3}(x), A_{I}^{3}(0) \leq A_{I}^{3}(x), \sqrt[3]{A_{N}(0)} \geq \sqrt[3]{A_{N}(x)}
$$

Proof. Suppose $\bar{A}$ is a $(3,3, \sqrt[3]{\cdot})$-PFSA of $X$ and let $x \in X$. Then we have

$$
\begin{aligned}
A_{P}^{3}(0) & =A_{P}^{3}(x * x)\left[\text { By the axiom }\left(\mathrm{BCC}_{3}\right)\right] \\
& \geq A_{P}^{3}(x) \wedge A_{P}^{3}(x)\left[\text { By the condition }\left(\mathrm{PFSA}_{1}\right)\right] \\
& =A_{P}^{3}(x) \\
A_{I}^{3}(0) & =A_{I}^{3}(x * x) \\
& \leq A_{I}^{3}(x) \vee A_{I}^{3}(x)\left[\text { By the condition }\left(\mathrm{PFSA}_{2}\right)\right] \\
& =A_{I}^{3}(x), \\
\sqrt[3]{A_{N}(0)} & =\sqrt[3]{A_{N}(x * x)} \\
& \geq \sqrt[3]{A_{N}(x)} \wedge \sqrt[3]{A_{N}(x)}\left[\text { By the condition }\left(\mathrm{PFSA}_{3}\right)\right] \\
& =\sqrt[3]{A_{N}(x)}
\end{aligned}
$$

Thus the results hold.
Definition 3.11. Let $\bar{A}$ be a $(3,3, \sqrt[3]{\cdot})$-PFSA of a $B C C$-algebra $X$. Then $\bar{A}$ is called a $(3,3, \sqrt[3]{\cdot}$ )-picture fuzzy BCK-ideal (briefly, $(3,3, \sqrt[3]{\cdot})$-PFBCKI) of $X$, if it satisfies the following conditions: for any $x, y \in X$,
$\left(\mathrm{PFBCKI}_{1}\right) A_{p}^{3}(0) \geq A_{P}^{3}(x), A_{I}^{3}(0) \leq A_{I}^{3}(x), \sqrt[3]{A_{N}(0)} \geq \sqrt[3]{A_{N}(x)}$,
$\left(\mathrm{PFBCCI}_{2}\right) A_{p}^{3}(x) \geq A_{P}^{3}(x * y) \wedge A_{P}^{3}(y)$,
$\left(\mathrm{PFBCCI}_{3}\right) A_{I}^{3}(x) \leq A_{I}^{3}(x * y) \vee A_{I}^{3}(y)$,
$\left(\mathrm{PFBCCI}_{4}\right) \sqrt[3]{A_{N}(x)} \geq \sqrt[3]{A_{N}(x * y)} \wedge \sqrt[3]{A_{N}(y)}$.
Definition 3.12. Let $\bar{A}$ be a $(3,3, \sqrt[3]{\cdot})$-PFSA of a $B C C$-algebra $X$. Then $\bar{A}$ is called a $(3,3, \sqrt[3]{\cdot}$ )-picture fuzzy BCC-ideal (briefly, $(3,3, \sqrt[3]{\cdot})$-PFBCCI) of $X$, if it satisfies the following conditions: for any $x, y, z \in X$,
$\left(\mathrm{PFBCCI}_{1}\right) A_{P}^{3}(0) \geq A_{P}^{3}(x), A_{I}^{3}(0) \leq A_{I}^{3}(x), \sqrt[3]{A_{N}(0)} \geq \sqrt[3]{A_{N}(x)}$,
$\left(\mathrm{PFBCCI}_{2}\right) A_{P}^{3}(x * z) \geq A_{P}^{3}((x * y) * z) \wedge A_{P}^{3}(y)$,
$\left(\mathrm{PFBCCI}_{3}\right) A_{I}^{3}(x * z) \leq A_{I}^{3}((x * y) * z) \vee A_{I}^{3}(y)$,
$\left(\mathrm{PFBCCI}_{4}\right) \sqrt[3]{A_{N}(x * z)} \geq \sqrt[3]{\left.A_{N}((x * y) * z)\right)} \wedge \sqrt[3]{A_{N}(y)}$.
Example 3.13. Let $X$ be the $B C C$-algebra and $\bar{A}$ be the $(3,3, \sqrt[3]{\cdot})$-PFS in $X$ given in Example 3.9. Then we can easily check that $\bar{A}$ is a $(3,3, \sqrt[3]{\cdot})$-PFBCCI of $X$.
Lemma 3.14. Let $\bar{A}$ be a $(3,3, \sqrt[3]{\cdot})$-PFBCCI of a BCC-algebra $X$. If $x \leq y$ in $X$, then $A_{P}^{3}(x) \geq A_{P}^{3}(y), A_{I}^{3}(x) \leq A_{I}^{3}(y), \sqrt[3]{A_{N}(x)} \geq \sqrt[3]{A_{N}(y)}$.
Proof. Let $x, y \in X$ such that $x \leq y$. Then clearly, $x * y=0$. Since $\bar{A}$ is a $(3,3, \sqrt[3]{\cdot})$ PFBCCI of $X$, by the condition $\left(\mathrm{PFBCCI}_{1}\right)$,

$$
\begin{equation*}
A_{P}^{3}(0) \geq A_{P}^{3}(x), A_{I}^{3}(0) \leq A_{I}^{3}(x), \sqrt[3]{A_{N}(0)} \geq \sqrt[3]{A_{N}(x)} \tag{3.1}
\end{equation*}
$$

Thus we have

$$
\begin{aligned}
A_{P}^{3}(x) & =A_{P}^{3}(x * 0)\left[\mathrm{By} \text { the axiom }\left(\mathrm{BCC}_{2}\right)\right] \\
& \geq A_{P}^{3}((x * y) * 0) \wedge A_{P}^{3}(y)\left[\mathrm{By} \text { the condition }\left(\mathrm{PFBCCI}_{2}\right)\right] \\
& =A_{P}^{3}(0 * 0) \wedge A_{P}^{3}(y)[\text { Since } x * y=0] \\
& =A_{P}^{3}(0) \wedge A_{P}^{3}(y)\left[\text { By the axiom }\left(\mathrm{BCC}_{3}\right)\right] \\
& =A_{P}^{3}(y),[\mathrm{By}(3.1)] \\
A_{I}^{3}(x) & =A_{I}^{3}(x * 0) \\
& \leq A_{I}^{3}((x * y) * 0) \vee A_{I}^{3}(y)\left[\text { By the condition }\left(\mathrm{PFBCCI}_{3}\right)\right] \\
& =A_{I}^{3}(0 * 0) \vee A_{I}^{3}(y) \\
& =A_{I}^{3}(0) \vee A_{I}^{3}(y) \\
& =A_{I}^{3}(y), \\
\sqrt[3]{A_{N}(x)} & =\sqrt[3]{A_{N}(x * 0)} \\
& \geq \sqrt[3]{A_{N}((x * y) * 0)} \wedge \sqrt[3]{A_{N}(y)}\left[\text { By the condition }\left(\mathrm{PFBCCI}_{4}\right)\right] \\
& =\sqrt[3]{A_{N}(0 * 0)} \wedge \sqrt[3]{A_{N}(y)} \\
& =\sqrt[3]{A_{N}(0)} \wedge \sqrt[3]{A_{N}(y)} \\
& =\sqrt[3]{A_{N}(y)}
\end{aligned}
$$

Thus the results hold.
Lemma 3.15. Let $\bar{A}$ be a $(3,3, \sqrt[3]{\cdot})$-PFBCCI of a BCC-algebra $X$. If $x * y \leq z$ in $X$, then the following inequalities:
$A_{P}^{3}(x) \geq A_{P}^{3}(z) \wedge A_{P}^{3}(y), A_{I}^{3}(x) \leq A_{I}^{3}(z) \vee A_{I}^{3}(y), \sqrt[3]{A_{N}(x)} \geq \sqrt[3]{A_{N}(z)} \wedge \sqrt[3]{A_{N}(y)}$.
Proof. Let $x, y, z \in X$ such that $x * y \leq z$. Then by Lemma 3.14, we get

$$
\begin{equation*}
A_{P}^{3}(x * y) \geq A_{P}^{3}(z), A_{I}^{3}(x * y) \leq A_{I}^{3}(z), \sqrt[3]{A_{N}(x * y)} \geq \sqrt[3]{A_{N}(z)} \tag{3.2}
\end{equation*}
$$

Thus we have

$$
\begin{aligned}
A_{P}^{3}(x) & =A_{P}^{3}(x * 0)\left[\mathrm{By} \text { the axiom }\left(\mathrm{BCC}_{2}\right)\right] \\
& \geq A_{P}^{3}((x * y) * 0) \wedge A_{P}^{3}(y)\left[\mathrm{By} \text { the condition }\left(\mathrm{PFBCCI}_{2}\right)\right] \\
& =A_{P}^{3}(x * y) \wedge A_{P}^{3}(y)\left[\text { By the axiom }\left(\mathrm{BCC}_{2}\right)\right] \\
& \geq A_{P}^{3}(z) \wedge A_{P}^{3}(y),[\text { By the axiom }(3.2)] \\
A_{I}^{3}(x) & =A_{I}^{3}(x * 0) \\
& \leq A_{I}^{3}((x * y) * 0) \vee A_{I}^{3}(y)\left[\text { By the condition }\left(\mathrm{PFBCCI}_{3}\right)\right] \\
& =A_{I}^{3}(x * y) \vee A_{I}^{3}(y) \\
& \geq A_{I}^{3}(z) \vee A_{I}^{3}(y), \\
\sqrt[3]{A_{N}(x)} & =\sqrt[3]{A_{N}(x * 0)} \\
& \geq \sqrt[3]{A_{N}((x * y) * 0)} \wedge \sqrt[3]{A_{N}(y)}\left[\text { By the condition }\left(\mathrm{PFBCCI}_{4}\right)\right] \\
& =\sqrt[3]{A_{N}(x * y)} \wedge \sqrt[3]{A_{N}(y)} \\
& \geq \sqrt[3]{A_{N}(z)} \wedge \sqrt[3]{A_{N}(y)}
\end{aligned}
$$

Thus the inequalities hold.
Proposition 3.16. Every $(3,3, \sqrt[3]{\cdot})$-PFBCKI of a BCK-algebra $X$ is a $(3,3, \sqrt[3]{\cdot})$ PFBCCI of $X$.
Proof. Let $\bar{A}$ be a $(3,3, \sqrt[3]{\cdot})$-PFBCKI of a $B C K$-algebra $X$. Then clearly, $\bar{A}$ satisfies the condition $\left(\mathrm{PFBCCI}_{1}\right)$. Let $x, y, z \in X$. Since $X$ is a $B C K$-algebra,

$$
(x * y) * z=(x * z) * y \text { for any } x, y, z \in X
$$

Then we have

$$
\begin{aligned}
A_{P}^{3}(x * z) & \geq A_{P}^{3}((x * z) * y) \wedge A_{P}^{3}(y)\left[\text { By the condition }\left(\mathrm{PFBCKI}_{2}\right)\right] \\
& =A_{P}^{3}((x * y) * z) \wedge A_{P}^{3}(y) \\
A_{I}^{3}(x * z) & \leq A_{I}^{3}((x * z) * y) \vee A_{I}^{3}(y)\left[\text { By the condition }\left(\mathrm{PFBCKI}_{3}\right)\right] \\
& =A_{I}^{3}((x * y) * z) \vee A_{I}^{3}(y) \\
\sqrt[3]{A_{N}(x * z)} & \leq \sqrt[3]{A_{N}((x * z) * y)} \wedge \sqrt[3]{A_{N}(y)}\left[\text { By the condition }\left(\mathrm{PFBCKI}_{4}\right)\right] \\
& =\sqrt[3]{A_{N}((x * y) * z)} \wedge \sqrt[3]{A_{N}(y)}
\end{aligned}
$$

Thus $\bar{A}$ satisfies the conditions $\left(\mathrm{PFBCCI}_{2}\right),\left(\mathrm{PFBCCI}_{3}\right)$ and $\left(\mathrm{PFBCCI}_{4}\right)$. So $\bar{A}$ is a $(3,3, \sqrt[3]{\cdot})$-PFBCCI of $X$.

Proposition 3.17. Every $(3,3, \sqrt[3]{\cdot})$-PFBCKI of a BCC-algebra $X$ is a $(3,3, \sqrt[3]{ })$ PFSA of $X$.

Proof. Let $\bar{A}$ be a $(3,3, \sqrt[3]{\cdot})$-PFBCKI of a $B C C$-algebra $X$ and let $x, y \in X$. Then by Result 2.2 (1) and the condition $\left(\mathrm{PFBCKI}_{1}\right)$, we get

$$
\begin{gather*}
A_{P}^{3}\left(((x * y) * x)=A_{P}^{3}(0) \geq A_{P}^{3}(x)\right.  \tag{3.3}\\
A_{I}^{3}\left(((x * y) * x)=A_{I}^{3}(0) \leq A_{I}^{3}(x)\right.  \tag{3.4}\\
\sqrt[3]{A_{N}((x * y) * x)}=\sqrt[3]{A_{N}(0)} \geq \sqrt[3]{A_{N}(x)} \tag{3.5}
\end{gather*}
$$

Thus we have

$$
\begin{aligned}
A_{P}^{3}(x * y) & \geq A_{P}^{3}((x * y) * x) \wedge A_{P}^{3}(x)\left[\text { By the condition }\left(\mathrm{PFBCKI}_{2}\right)\right] \\
& =A_{P}^{3}(0) \wedge A_{P}^{3}(x)[\mathrm{By} \text { Result } 2.2(1)] \\
& =A_{P}^{3}(x)[\operatorname{By}(3.3)] \\
& \geq A_{P}^{3}(x) \wedge A_{P}^{3}(y) \\
A_{I}^{3}(x * y) & \leq A_{I}^{3}((x * y) * x) \vee A_{I}^{3}(x)\left[\text { By the condition }\left(\mathrm{PFBCKI}_{3}\right)\right] \\
& =A_{P}^{3}(0) \vee A_{P}^{3}(x) \\
& =A_{P}^{3}(x)[\operatorname{By}(3.4)] \\
& \geq A_{P}^{3}(x) \vee A_{P}^{3}(y) \\
\sqrt[3]{A_{N}(x * y)} & \geq \sqrt[3]{A_{N}((x * y) * x)} \wedge \sqrt[3]{A_{N}(x)}\left[\text { By the condition }\left(\mathrm{PFBCKI}_{4}\right)\right] \\
& \left.=\sqrt[3]{A_{N}(0)} \wedge \sqrt[3]{A_{N}(x)}(1)\right] \\
& =\sqrt[3]{A_{N}(x)}[\operatorname{By}(3.4)] \\
& \geq \sqrt[3]{A_{N}(x)} \wedge \sqrt[3]{A_{N}(y)}
\end{aligned}
$$

So $\bar{A}$ is a $(3,3, \sqrt[3]{\cdot})$-PFSA of $X$.
Proposition 3.18. Let $\left(\bar{M}_{j}\right)_{j \in J}$ be a family of $(3,3, \sqrt[3]{\cdot})$-PFBCCIs of a BCCalgebra $X$. Then $\bigcap_{j \in J} \bar{M}_{j}$ is a $(3,3, \sqrt[3]{\cdot})$-PFBCCI of $X$.
Proof. Let $\bar{M}=\bigcap_{j \in J} \bar{M}_{j}$ and let $x \in X$. Then we have

$$
\begin{aligned}
M_{P}^{3}(0) & =\bigwedge_{j \in J} M_{P, j}^{3}(0) \geq \bigwedge_{j \in J} M_{P, j}^{3}(x)=M_{P}^{3}(x), \\
M_{I}^{3}(0) & =\bigvee_{j \in J} M_{I, j}^{3}(0) \leq \bigvee_{j \in J} M_{I, j}^{3}(x)=M_{I}^{3}(x),
\end{aligned}
$$

$$
\left.\sqrt[3]{M_{N}(0)}=\bigwedge_{j \in J} \sqrt[3]{A_{N, j}(0)} \geq \bigwedge_{j \in J} \sqrt[3]{A_{N, j}(x)}\right)=\sqrt[3]{M_{N}(x)}
$$

Thus $\bar{M}$ satisfies the condition ( $\mathrm{PFBCCI}_{1}$ ).
Now let $x, y, z \in X$. Then we get

$$
\begin{aligned}
& M_{P}^{3}(x * z)=\bigwedge_{j \in J} M_{P, j}^{3}(x * z) \\
& \geq \bigwedge_{j \in J}\left[M_{P, j}^{3}((x * y) * z) \wedge M_{P, j}^{3}(y)\right]\left[\mathrm{By}\left(\mathrm{PFBCCI}_{2}\right)\right] \\
& =\left(\bigwedge_{j \in J}\left[M_{P, j}^{3}((x * y) * z)\right) \wedge\left(\bigwedge_{j \in J} M_{P, j}^{3}(y)\right)\right. \\
& =M_{P}^{3}((x * y) * z) \wedge M_{P}^{3}(y), \\
& M_{I}^{3}(x * z)=\bigvee_{j \in J} M_{I, j}^{3}(x * z) \\
& \leq \bigvee_{j \in J}\left[M_{I, j}^{3}((x * y) * z) \vee M_{I, j}^{3}(y)\right]\left[\mathrm{By}\left(\mathrm{PFBCCI}_{3}\right)\right] \\
& =\left(\bigvee_{j \in J}\left[M_{I, j}^{3}((x * y) * z)\right) \vee\left(\bigvee_{j \in J} M_{I, j}^{3}(y)\right)\right. \\
& =M_{I}^{3}((x * y) * z) \vee M_{I}^{3}(y), \\
& \sqrt[3]{M_{N}(x * z)}=\bigwedge_{j \in J} \sqrt[3]{M_{N, j}(x * z)} \\
& \geq \bigwedge_{j \in J}\left[\sqrt[3]{M_{N, j}((x * y) * z)} \wedge \sqrt[3]{M_{N, j}(y)}\right]\left[\mathrm{By}\left(\mathrm{PFBCCI}_{2}\right)\right] \\
& =\left(\bigwedge _ { j \in J } \left[\sqrt [ 3 ] { M _ { N , j } ( ( x * y ) * z ) ) } \wedge \left(\bigwedge_{j \in J} \sqrt[3]{\left.M_{N, j}(y)\right)}\right.\right.\right. \\
& =\sqrt[3]{M_{N}((x * y) * z)} \wedge \sqrt[3]{M_{N}(y)} .
\end{aligned}
$$

Thus $\bar{M}$ satisfies the conditions $\left(\mathrm{PFBCCI}_{2}\right),\left(\mathrm{PFBCCI}_{3}\right)$ and $\left(\mathrm{PFBCCI}_{4}\right)$. So $\bar{M}$ is a $(3,3, \sqrt[3]{ })$-PFBCCI of $X$.
4. The image (pre-image) of a $(3,3, \sqrt[3]{ }$ )-PFBCCI under a homomorphism of $B C C$-algebras

Definition 4.1. Let $(X, *, 0)$ and $\left(Y, *^{\prime}, 0^{\prime}\right)$ be two $B C C$-algebras. Then a mapping $f: X \rightarrow Y$ is called a homomorphism, if $f(x * y)=f(x) *^{\prime} f(y)$ for any $x, y \in X$. Note that if $f: X \rightarrow Y$ is a homomorphism of $B C C$-algebras, then $f(0)=0^{\prime}$.

Definition 4.2. Let $X$ and $Y$ be two nonempty set, and let $\bar{A}$ be a $(3,3, \sqrt[3]{ })$-PFS in $X$ and let $\bar{B}$ be a $(3,3, \sqrt[3]{\cdot})$-PFS in $Y$.
(i) The image of $\bar{A}$, denoted by $f(\bar{A})$, is a $(3,3, \sqrt[3]{\bullet})$-PFS in $Y$ defined as follows: for each $y \in Y$,
$f(\bar{A})(y)= \begin{cases}\left\langle\bigwedge_{x \in f^{-1}(y)} A_{P}^{3}(x), \bigvee_{x \in f^{-1}(y)} A_{I}^{3}(x), \bigwedge_{x \in f^{-1}(y)} \sqrt[3]{A_{N}(x)}\right\rangle & \text { if } f^{-1}(y) \neq \varnothing \\ \langle 0,1,0\rangle & \text { otherwise. }\end{cases}$
(ii) The pre-image of $\bar{B}$, denoted by $f^{-1}(\bar{B})=\left\langle f^{-1}\left(B_{P}\right), f^{-1}\left(B_{I}\right), f^{-1}\left(A_{N}\right)\right\rangle$, is a $(3,3, \sqrt[3]{\cdot})$-PFS in $X$ defined as follows: for each $x \in X$,

$$
\begin{equation*}
f^{-1}(\bar{B})(x)=\left\langle B_{P}^{3}(f(x)), B_{I}^{3}(f(x)), \sqrt[3]{B_{N}(f(x))}\right\rangle \tag{4.2}
\end{equation*}
$$

In fact, $\left(f^{-1}\left(B_{P}\right)\right)^{3}(x)=B_{P}^{3}(f(x)),\left(f^{-1}\left(B_{I}\right)\right)^{3}(x)=B_{I}^{3}(f(x)), \sqrt[3]{f^{-1}\left(A_{N}\right)(x)}=$ $\sqrt[3]{B_{N}(f(x))}$.
Proposition 4.3. Let $f: X \rightarrow Y$ be a homomorphism of BCC-algebras. If $\bar{B}$ is a $(3,3, \sqrt[3]{)})$-PFBCCI of $Y$, then $f^{-1}(\bar{B})$ is a $(3,3, \sqrt[3]{ })$-PFBCCI of $X$.

Proof. Suppose $\bar{B}$ is a $(3,3, \sqrt[3]{\cdot})$-PFBCCI of $Y$ and let $x \in X$. Then we have

$$
\begin{aligned}
\left(f^{-1}\left(B_{P}\right)\right)^{3}(0) & =B_{P}^{3}(f(0)) \\
& =B_{P}^{3}(0)[\text { Since } f \text { is a homomorphism }] \\
& \geq B_{P}^{3}(f(x))\left[\text { By the condition }\left(\mathrm{PFBCCI}_{1}\right)\right] \\
& =\left(f^{-1}\left(B_{P}\right)\right)^{3}(x)
\end{aligned}
$$

Similarly, we get $\left(f^{-1}\left(B_{P}\right)\right)^{3}\left(0 \leq\left(f^{-1}\left(B_{P}\right)\right)^{3}(x)\right.$ and $\sqrt[3]{f^{-1}\left(A_{N}\right)(0)} \geq \sqrt[3]{f^{-1}\left(A_{N}\right)(x)}$.
Thus $f^{-1}(\bar{B})$ satisfies the condition $\left(\mathrm{PFBCCI}_{1}\right)$.
Now let $x, y, z \in X$. Then we get

$$
\begin{aligned}
& \left(f^{-1}\left(B_{P}\right)\right)^{3}(x * z)=B_{p}^{3}(f(x * z)) \\
& =B_{P}^{3}(f(x) * f(z)) \text { [Since } f \text { is a homomorphism] } \\
& \geq B_{P}^{3}((f(x) * f(y)) * f(z)) \wedge B_{P}^{3}(f(y)) \\
& \text { [By the condition }\left(\mathrm{PFBCCI}_{2}\right) \text { ] } \\
& \left.=B_{P}^{3}(f((x * y) * z))\right) \wedge B_{P}^{3}(f(y)) \\
& \text { [Since } f \text { is a homomorphism] } \\
& =\left(f^{-1}\left(B_{P}\right)\right)^{3}((x * y) * z) \wedge\left(f^{-1}\left(B_{P}\right)\right)^{3}(z), \\
& \left(f^{-1}\left(B_{I}\right)\right)^{3}(x * z)=B_{I}^{3}(f(x * z)) \\
& =B_{I}^{3}(f(x) * f(z)) \\
& \leq B_{I}^{3}((f(x) * f(y)) * f(z)) \vee B_{I}^{3}(f(y)) \\
& \text { [By the condition }\left(\mathrm{PFBCCI}_{3}\right) \text { ] } \\
& \left.=B_{I}^{3}(f((x * y) * z))\right) \vee B_{I}^{3}(f(y)) \\
& =\left(f^{-1}\left(B_{I}\right)\right)^{3}((x * y) * z) \vee\left(f^{-1}\left(B_{I}\right)\right)^{3}(z), \\
& \sqrt[3]{f^{-1}\left(B_{N}\right)(x * z)}=\sqrt[3]{B_{N}(f(x * z))} \\
& =\sqrt[3]{B_{N}(f(x) * f(z))} \\
& \geq \sqrt[3]{B_{N}((f(x) * f(y)) * f(z))} \wedge \sqrt[3]{B_{N}(f(y))} \\
& \text { [By the condition }\left(\mathrm{PFBCCI}_{4}\right) \text { ] } \\
& =\sqrt[3]{B_{N}(f((x * y) * z))} \wedge \sqrt[3]{B_{N}(f(y))} \\
& =\sqrt[3]{f^{-1}\left(B_{N}\right)((x * y) * z)} \wedge \sqrt[3]{f^{-1}\left(B_{N}\right)(z)} .
\end{aligned}
$$

Thus $f^{-1}(\bar{B})$ satisfies the conditions $\left(\mathrm{PFBCCI}_{2}\right),\left(\mathrm{PFBCCI}_{3}\right)$ and $\left(\mathrm{PFBCCI}_{4}\right)$. So $f^{-1}(\bar{B})$ is a $(3,3, \sqrt[3]{\cdot})$-PFBCCI of $X$.

Proposition 4.4. Let $f: X \rightarrow Y$ be an epiorphism of $B C C$-algebras and let $\bar{B}$ be $a(3,3, \sqrt[3]{\cdot})$-PFS in $Y$. If $f^{-1}(\bar{B})$ is a $(3,3, \sqrt[3]{\cdot})$-PFBCCI of $X$, then $\bar{B}$ is a $(3,3, \sqrt[3]{ })-P F B C C I$ of $Y$.
Proof. Suppose $f^{-1}(\bar{B})$ is a $(3,3, \sqrt[3]{\cdot})$-PFBCCI of $X$ and let $a \in Y$. Since $f$ is surjective, there is $x \in X$ such that $a=f(x)$. Then we have

$$
\begin{aligned}
B_{P}^{3}(0) & \left.=B_{P}^{3}(f(0)) \text { Since } f \text { is a homomorphism }\right] \\
& =\left(f^{-1}\left(B_{P}\right)\right)^{3}(0) \\
& \geq\left(f^{-1}\left(B_{P}\right)\right)^{3}(x)\left[\text { By the condition }\left(\mathrm{PFBCCI}_{1}\right)\right] \\
& =B_{P}^{3}(f(x)) \\
& =B_{P}^{3}(a) \\
B_{I}^{3}(0) & =B_{I}^{3}(f(0)) \\
& =\left(f^{-1}\left(B_{I}\right)\right)^{3}(0) \\
& \leq\left(f^{-1}\left(B_{I}\right)\right)^{3}(x) \\
& =B_{I}^{3}(f(x)) \\
& =B_{I}^{3}(a)
\end{aligned}
$$

$$
\begin{aligned}
\sqrt[3]{B_{N}(0)} & =\sqrt[3]{B_{N}(f(0))} \\
& =\sqrt[3]{f^{-1}\left(B_{N}\right)(0)} \\
& \geq \sqrt[3]{f^{-1}\left(B_{N}\right)(x)} \\
& =\sqrt[3]{B_{N}(f(x))} \\
& =\sqrt[3]{B_{N}(a)} .
\end{aligned}
$$

Thus $\bar{B}$ satisfies the condition $\left(\mathrm{PFBCCI}_{1}\right)$.
Now let $a, b, c \in X$. Then clearly, there are $x, y, z \in X$ such that $a=f(x), b=$ $f(y), c=f(z)$. Thus we get

$$
\begin{aligned}
& B_{P}^{3}(a * c)=B_{P}^{3}((f(x) * f(z)) \\
& =B_{P}^{3}(f(x * z)) \text { [Since } f \text { is a homomorphism] } \\
& =\left(f^{-1}\left(B_{P}\right)^{3}(x * z)\right. \\
& \geq\left(f ^ { - 1 } ( B _ { P } ) ^ { 3 } ( ( x * y ) * z ) \wedge \left(f^{-1}\left(B_{P}\right)^{3}(y)\right.\right. \\
& \text { [By the condition ( } \mathrm{PFBCCI}_{2} \text { ) } \\
& \left.=B_{p}^{3}(f((x * y) * z))\right) \wedge B_{P}^{3}(f(y)) \\
& =B_{p}^{3}\left(((f(x) * f(y)) * f(z)) \wedge B_{P}^{3}(f(y))\right. \\
& \text { [Since } f \text { is a homomorphism] } \\
& =B_{p}^{3}((a * b) * c) \wedge B_{P}^{3}(b), \\
& B_{I}^{3}(a * c)=B_{I}^{3}((f(x) * f(z)) \\
& =B_{I}^{3}(f(x * z)) \\
& =\left(f^{-1}\left(B_{I}\right)^{3}(x * z)\right. \\
& \leq\left(f ^ { - 1 } ( B _ { I } ) ^ { 3 } ( ( x * y ) * z ) \vee \left(f^{-1}\left(B_{I}\right)^{3}(y)\right.\right. \\
& \text { [By the condition }\left(\mathrm{PFBCCI}_{3}\right) \\
& \left.=B_{I}^{3}(f((x * y) * z))\right) \vee B_{I}^{3}(f(y)) \\
& =B_{I}^{3}\left(((f(x) * f(y)) * f(z)) \vee B_{I}^{3}(f(y))\right. \\
& =B_{I}^{3}((a * b) * c) \vee B_{I}^{3}(b) \text {, } \\
& \sqrt[3]{B_{N}(a * c)}=\sqrt[3]{B_{N}((f(x) * f(z))} \\
& =\sqrt[3]{B_{N}(f(x * z))} \\
& =\sqrt[3]{f^{-1}\left(A_{N}\right)(x * z)} \\
& \geq \sqrt[3]{f^{-1}\left(A_{N}\right)((x * y) * z)} \wedge \sqrt[3]{f^{-1}\left(A_{N}\right)(y)} \\
& \text { [By the condition }\left(\mathrm{PFBCCI}_{4}\right) \\
& =\sqrt[3]{\left.B_{N}(f((x * y) * z))\right)} \wedge \sqrt[3]{B_{N}(f(y))} \\
& =\sqrt[3]{B_{N}(((f(x) * f(y)) * f(z))} \wedge \sqrt[3]{B_{N}(f(y))} \\
& =\sqrt[3]{B_{N}((a * b) * c)} \wedge \sqrt[3]{B_{N}(b)} .
\end{aligned}
$$

Thus $\bar{B}$ satisfies the conditions $\left(\mathrm{PFBCCI}_{2}\right)$, $\left(\mathrm{PFBCCI}_{3}\right)$ and $\left(\mathrm{PFBCCI}_{4}\right)$. So $\bar{B}$ is a $(3,3, \sqrt[3]{\cdot})$-PFBCCI of $Y$.
5. The product of ( $3,3, \sqrt[3]{\cdot}$ )-PFBCCIs

Definition 5.1. Let $X, Y$ be two nonempty sets, let $\bar{A}$ be a $(3,3, \sqrt[3]{)})$-PFS in $X$ and let $\bar{B}$ be a $(3,3, \sqrt[3]{)})$-PFS in $Y$. Then the Cartesian product $\bar{A} \times \bar{B}=$ $\left\langle A_{P} \times B_{P}, A_{I} \times B_{I}, A_{N} \times B_{N}\right\rangle$ of $\bar{A}$ and $\bar{B}$ is a $(3,3, \sqrt[3]{\cdot})$-PFS in $X \times Y$ defined as follows: for each $(x, y) \in X \times Y$,

$$
\begin{gathered}
\left(A_{P} \times B_{P}\right)^{3}(x, y)=A_{P}^{3}(x) \wedge B_{P}^{3}(y),\left(A_{I} \times B_{I}\right)^{3}(x, y)=A_{I}^{3}(x) \vee B_{I}^{3}(y), \\
\sqrt[3]{\left(A_{N} \times B_{N}\right)(x, y)}=\sqrt[3]{A_{N}(x)} \wedge \sqrt[3]{B_{N}(y)} .
\end{gathered}
$$

Remark 5.2. Let $X$ and $Y$ be two $B C C$-algebras. We define $*$ on $X \times Y$ by: for any $(x, y),(u, v) \in X \times Y$,

$$
(x, y) *(u, v)=(x * u, y * v)
$$

Then clearly, $(X \times Y, *,(0,0))$ is a $B C C$-algebra.
Proposition 5.3. Let $X$ be a BCC-algebra. If $\bar{A}$ and $\bar{B}$ are two (3,3, $\sqrt[3]{ })$-PFBCCIs of $X$, then $\bar{A} \times \bar{B}$ is a $(3,3, \sqrt[3]{\cdot})$-PFBCCI of $X \times X$.

Proof. Let $(x, y) \in X \times X$. Then by the condition $\left(\mathrm{PFBCCI}_{1}\right)$, we have

$$
\begin{gathered}
\left(A_{P} \times B_{P}\right)^{3}(0,0)=A_{P}(0) \wedge B_{P}(0) \geq A_{P}(x) \wedge B_{P}(y)=\left(A_{P} \times B_{P}\right)^{3}(x, y) \\
\left(A_{I} \times B_{I}\right)^{3}(0,0)=A_{I}(0) \vee B_{I}(0) \leq A_{I}(x) \vee B_{I}(y)=\left(A_{I} \times B_{I}\right)^{3}(x, y) \\
\sqrt[3]{\left(A_{N} \times B_{N}\right)(0,0)}=\sqrt[3]{A_{N}(0)} \wedge \sqrt[3]{B_{N}(0)} \geq \sqrt[3]{A_{N}(x)} \wedge \sqrt[3]{B_{N}(y)}=\sqrt[3]{\left(A_{N} \times B_{N}\right)(x, y)}
\end{gathered}
$$

Thus $\times \bar{B}$ satisfies the condition $\left(\mathrm{PFBCCI}_{1}\right)$.
Now let $\left(x_{1}, x_{2}\right),\left(y_{1}, y_{2}\right),\left(z_{1}, z_{2}\right) \in X \times X$. Then we get

$$
\begin{aligned}
& \left(A_{P} \times B_{P}\right)^{3}\left(\left(\left(x_{1}, x_{2}\right) *\left(y_{1}, y_{2}\right)\right) *\left(z_{1}, z_{2}\right)\right) \wedge\left(A_{P} \times B_{P}\right)^{3}\left(y_{1}, y_{2}\right) \\
= & \left(A_{P} \times B_{P}\right)^{3}\left(\left(x_{1} * y_{1}\right) * z_{1},\left(x_{2} * y_{2}\right) * z_{2}\right) \wedge\left(A_{P} \times B_{P}\right)^{3}\left(y_{1}, y_{2}\right) \\
= & {\left[A_{P}\left(\left(x_{1} * y_{1}\right) * z_{1}\right) \wedge B_{P}\left(\left(x_{2} * y_{2}\right) * z_{2}\right)\right] \wedge\left[A_{P}\left(y_{1}\right) \wedge B_{P}\left(y_{2}\right)\right] } \\
= & {\left[A_{P}\left(\left(x_{1} * y_{1}\right) * z_{1}\right) \wedge A_{P}\left(y_{1}\right)\right] \wedge\left[B_{P}\left(\left(x_{2} * y_{2}\right) * z_{2}\right) \wedge B_{P}\left(y_{2}\right)\right] } \\
\leq & A_{P}\left(x_{1} * z_{1}\right) \wedge B_{P}\left(x_{2} * z_{2}\right) \\
= & \left(A_{P} \times B_{P}\right)^{3}\left(x_{1} * z_{1}, x_{2} * z_{2}\right), \\
& \left(A_{I} \times B_{I}\right)^{3}\left(\left(\left(x_{1}, x_{2}\right) *\left(y_{1}, y_{2}\right)\right) *\left(z_{1}, z_{2}\right)\right) \vee\left(A_{I} \times B_{I}\right)^{3}\left(y_{1}, y_{2}\right) \\
= & \left(A_{I} \times B_{I}\right)^{3}\left(\left(x_{1} * y_{1}\right) * z_{1},\left(x_{2} * y_{2}\right) * z_{2}\right) \vee\left(A_{I} \times B_{I}\right)^{3}\left(y_{1}, y_{2}\right) \\
= & {\left[A_{I}\left(\left(x_{1} * y_{1}\right) * z_{1}\right) \vee B_{I}\left(\left(x_{2} * y_{2}\right) * z_{2}\right)\right] \vee\left[A_{I}\left(y_{1}\right) \vee B_{P}\left(y_{2}\right)\right] } \\
= & {\left[A_{I}\left(\left(x_{1} * y_{1}\right) * z_{1}\right) \vee A_{P}\left(y_{1}\right)\right] \vee\left[B_{I}\left(\left(x_{2} * y_{2}\right) * z_{2}\right) \vee B_{P}\left(y_{2}\right)\right] } \\
\geq & A_{I}\left(x_{1} * z_{1}\right) \vee B_{I}\left(x_{2} * z_{2}\right) \\
= & \left(A_{I} \times B_{I}\right)^{3}\left(x_{1} * z_{1}, x_{2} * z_{2}\right),
\end{aligned}
$$

$$
\begin{aligned}
& \sqrt[3]{\left(A_{N} \times B_{N}\right)\left(\left(\left(x_{1}, x_{2}\right) *\left(y_{1}, y_{2}\right)\right) *\left(z_{1}, z_{2}\right)\right)} \wedge \sqrt[3]{\left(A_{N} \times B_{N}\right)\left(y_{1}, y_{2}\right)} \\
= & \sqrt[3]{\left(A_{N} \times B_{N}\right)\left(\left(x_{1} * y_{1}\right) * z_{1},\left(x_{2} * y_{2}\right) * z_{2}\right)} \wedge \sqrt[3]{\left(A_{N} \times B_{N}\right)\left(y_{1}, y_{2}\right)} \\
= & {\left[\sqrt[3]{A_{N}\left(\left(x_{1} * y_{1}\right) * z_{1}\right)} \wedge \sqrt[3]{B_{N}\left(\left(x_{2} * y_{2}\right) * z_{2}\right)}\right] \wedge\left[\sqrt[3]{A_{N}\left(y_{1}\right)} \wedge \sqrt[3]{B_{N}\left(y_{2}\right)}\right] } \\
= & {\left[\sqrt[3]{A_{N}\left(\left(x_{1} * y_{1}\right) * z_{1}\right)} \wedge \sqrt[3]{A_{N}\left(y_{1}\right)}\right] \wedge\left[\sqrt[3]{B_{N}\left(\left(x_{2} * y_{2}\right) * z_{2}\right)} \wedge \sqrt[3]{B_{N}\left(y_{2}\right)}\right] } \\
\leq & \sqrt[3]{A_{N}\left(x_{1} * z_{1}\right)} \wedge \sqrt[3]{B_{N}\left(x_{2} * z_{2}\right)} \\
= & \sqrt[3]{\left(A_{N} \times B_{N}\right)\left(x_{1} * z_{1}, x_{2} * z_{2}\right)} .
\end{aligned}
$$

Thus $\bar{A} \times \bar{B}$ satisfies the conditions $\left(\mathrm{PFBCCI}_{2}\right),\left(\mathrm{PFBCCI}_{3}\right)$ and $\left(\mathrm{PFBCCI}_{4}\right)$. So $\bar{A} \times \bar{B}$ is a $(3,3, \sqrt[3]{\cdot})$-PFBCCI of $X \times X$.
6. Correlation coefficients for $(3,3, \sqrt[3]{\cdot})$-Picture fuzzy sets

Correlation plays an important role in statistics, engineering sciences and so on (See $[2,27,32]$ ). In this section, we propose some correlation coefficients for any two $(3,3, \sqrt[3]{\cdot})$-picture fuzzy sets.
Definition 6.1. Let $X=\left\{x_{1}, x_{2}, \cdots, x_{n}\right\}$ be a universe of discourse, and let $\bar{A}$ and $\bar{B}$ be two ( $3,3, \sqrt[3]{-}$ )-PFSs.
(i) The informational $(3,3, \sqrt[3]{\cdot})$-picture fuzzy energy of $\bar{A}$, denoted by $E_{(3,3, \sqrt[3]{r})}(A)$, is defined as follows: for each $i \in\{1,2, \cdots, n\}$,

$$
E_{(3,3, \sqrt[3]{-})}(A)=\Sigma_{i=1}^{n}\left[\left(A_{P}^{3}\left(x_{i}\right)\right)^{2}+\left(A_{I}^{3}\left(x_{i}\right)\right)^{2}+\left(\sqrt[3]{A_{N}\left(x_{i}\right)}\right)^{2}\right]
$$

(ii) The correlation between $\bar{A}$ and $\bar{B}$, denoted by $C_{(3,3, \sqrt[3]{-)}}(\bar{A}, \bar{B})$, is defined as follows: for each $i \in\{1,2, \cdots, n\}$,

$$
\begin{gathered}
C_{(3,3, \sqrt[3]{)})}(\bar{A}, \bar{B})=\sum_{i=1}^{n}(\bar{A} \times \bar{B})\left(x_{i}, x_{i}\right) \text {, i.e., } \\
=\sum_{(3,3,3 / 9}^{n}(\bar{A}, \bar{B}) \\
C_{i=1}^{3}\left[\left(A_{P}^{3}\left(x_{i}\right) \times B_{P}^{3}\left(x_{i}\right)\right)+\left(A_{P}^{3}\left(x_{i}\right) \times B_{P}^{3}\left(x_{i}\right)\right)+\left(\sqrt[3]{A_{N}\left(x_{i}\right)} \times \sqrt[3]{B_{N}\left(x_{i}\right)}\right)\right] .
\end{gathered}
$$

(iii) The correlation coefficient between $\bar{A}$ and $\bar{B}$, denoted by $\kappa_{(3,3,3 /)}(\bar{A}, \bar{B})$, is defined as follows: for each $i \in\{1,2, \cdots, n\}$,

$$
\begin{gathered}
\kappa_{(3,3, \sqrt[3]{\cdot})}(\bar{A}, \bar{B})=\frac{C_{(3,3, \sqrt[3]{\cdot})}(\bar{A}, \bar{B})}{\sqrt{E_{(3,3, \sqrt[3]{r})}(A) \cdot E_{(3,3, \sqrt[3]{P})}(B)}}, \text { i.e., } \\
=\frac{\kappa_{(3,3, \sqrt[3]{r})}(\bar{A}, \bar{B})}{\sqrt{\sum_{i=1}^{n}\left[\left(A_{P}^{3}\left(x_{i}\right) \times B_{P}^{3}\left(x_{i}\right)\right)+\left(A_{P}^{3}\left(x_{i}\right) \times B_{P}^{3}\left(x_{i}\right)\right)+\left(\sqrt[3]{A_{N}\left(x_{i}\right)} \times \sqrt[3]{B_{N}\left(x_{i}\right)}\right)\right]}} .
\end{gathered}
$$

On the other hand, by using idea of Xu [33], we can suggest an alternative form of the correlation coefficient $\kappa(\bar{A}, \bar{B})$ between two $\bar{A}$ and $\bar{B}$ as follows: for each $i \in\{1,2, \cdots, n\}$,

$$
=\frac{\kappa(\bar{A}, \bar{B})}{\sqrt{\Sigma_{i=1}^{n}\left[\left(A_{P}^{3}\left(x_{i}\right) \times B_{P}^{3}\left(x_{i}\right)\right)+\left(A_{P}^{3}\left(x_{i}\right) \times B_{P}^{3}\left(x_{i}\right)\right)+\left(\sqrt[3]{A_{N}\left(x_{i}\right)} \times \sqrt[3]{B_{N}\left(x_{i}\right)}\right)\right]}} \sqrt{\sum_{i=1}^{n}\left[\left(A_{P}^{3}\left(x_{i}\right)\right)^{2}+\left(A_{I}^{3}\left(x_{i}\right)\right)^{2}+\left(\sqrt[3]{A_{N}\left(x_{i}\right)}\right)^{2}\right] \bigvee \Sigma_{i=1}^{n}\left[\left(B_{P}^{3}\left(x_{i}\right)\right)^{2}+\left(B_{I}^{3}\left(x_{i}\right)\right)^{2}+\left(\sqrt[3]{B_{N}\left(x_{i}\right)}\right)^{2}\right]} .
$$

The following is an immediate consequence of Definition 6.1.
Proposition 6.2. Let $\bar{A}$ and $\bar{B}$ be two $(3,3, \sqrt[3]{\cdot})$-PFSs in a universe of discourse $X=\left\{x_{1}, x_{2}, \cdots, x_{n}\right\}$. Then
(1) $C_{(3,3, \sqrt[3]{-})}(\bar{A}, \bar{A})=E_{(3,3, \sqrt[3]{-})}(A)$,
(2) $C_{(3,3, \sqrt[3]{2})}(\bar{A}, \bar{B})=C_{(3,3, \sqrt[3]{2})}(\bar{B}, \bar{A})$.

Proposition 6.3. Let $\bar{A}$ and $\bar{B}$ be two $(3,3, \sqrt[3]{\cdot})$-PFSs in a universe of discourse $X=\left\{x_{1}, x_{2}, \cdots, x_{n}\right\}$. Then
(1) $\kappa_{(3,3, \sqrt[3]{)})}(\bar{A}, \bar{B})=\kappa_{(3,3, \sqrt[3]{2})}(\bar{B}, \bar{A})$,
(2) $0 \leq \kappa_{(3,3,3,3)}(\bar{A}, \bar{B}) \leq 1$,
(3) if $\bar{A}=\bar{B}$, then $\kappa_{(3,3, \sqrt[3]{)})}(\bar{A}, \bar{B})=1$.

Proof. (1) The proof is straightforward.
(2) It is clear that $0 \leq \kappa_{(3,3, \sqrt[3]{5})}(\bar{A}, \bar{B})$. We prove that $\kappa_{(3,3, \sqrt[3]{2})}(\bar{A}, \bar{B}) \leq 1$. Recall the well-known Cauchy-Schwarz inequality.

$$
\begin{gather*}
\left(\sum_{i=1}^{n} a_{i} b_{i}\right)^{2} \leq\left(\sum_{i=1}^{n} a_{i}\right) \cdot\left(\sum_{i=1}^{n} b_{i}\right) \text { for any } a_{i}, b_{i} \in \mathbb{R} . \tag{6.1}
\end{gather*}
$$

Then by (5.1), we get

$$
\begin{aligned}
& \left(C_{(3,3, \sqrt[3]{r})}(\bar{A}, \bar{B})\right)^{2} \\
= & \left(\sum_{i=1}^{n}\left[\left(A_{P}^{3}\left(x_{i}\right) \times B_{P}^{3}\left(x_{i}\right)\right)+\left(A_{P}^{3}\left(x_{i}\right) \times B_{P}^{3}\left(x_{i}\right)\right)+\left(\sqrt[3]{A_{N}\left(x_{i}\right)} \times \sqrt[3]{B_{N}\left(x_{i}\right)}\right)\right]\right)^{2} \\
\leq & \left(\sum_{i=1}^{n}\left[\left(A_{P}^{3}\left(x_{i}\right)\right)^{2}+\left(A_{I}^{3}\left(x_{i}\right)\right)^{2}+\left(\sqrt[3]{A_{N}\left(x_{i}\right)}\right)^{2}\right]\right) \\
& \cdot\left(\sum_{i=1}^{n}\left[\left(A_{P}^{3}\left(x_{i}\right)\right)^{2}+\left(A_{I}^{3}\left(x_{i}\right)\right)^{2}+\left(\sqrt[3]{A_{N}\left(x_{i}\right)}\right)^{2}\right]\right) \\
= & E_{(3,3, \sqrt[3]{2})}(A) \cdot E_{(3,3,3 /)}(B) .
\end{aligned}
$$

Thus $\kappa_{(3,3, \sqrt[3]{\cdot})}(\bar{A}, \bar{B}) \leq 1$. So $0 \leq \kappa_{(3,3, \sqrt[3]{2})}(\bar{A}, \bar{B}) \leq 1$.
(3) The proof is straightforward.

Example 6.4. Let $\bar{A}$ and $\bar{B}$ be two $(3,3, \sqrt[3]{\cdot})$-PFSs in the universe of discourse $X=\{0,1,2,3\}$ defined by the following tables:

| $X$ | 0 | 1 | 2 | 3 |
| :---: | :---: | :---: | :---: | :---: |
| $A_{P}(x)$ | 0.04 | 0.03 | 0.02 | 0.01 |
| $A_{I}(x)$ | 0.02 | 0.02 | 0.03 | 0.03 |
| $A_{N}(x)$ | 0.006 | 0.004 | 0.002 | 0.001 |
| $A_{P}^{3}(x)$ | 0.000064 | 0.000027 | 0.000008 | 0.000001 |
| $A_{I}^{3}(x)$ | 0.000008 | 0.000008 | 0.000027 | 0.000027 |
| $\sqrt[3]{A_{N}(x)}$ | 0.181712 | 0.15874 | 0.12599 | 0.1 |
| Table 6.1 |  |  |  |  |

| $X$ | 0 | 1 | 2 | 3 |
| :---: | :---: | :---: | :---: | :---: |
| $B_{P}(x)$ | 0.04 | 0.03 | 0.02 | 0.01 |
| $B_{I}(x)$ | 0.01 | 0.02 | 0.03 | 0.04 |
| $B_{N}(x)$ | 0.003 | 0.002 | 0.002 | 0.001 |
| $B_{P}^{3}(x)$ | 0.000064 | 0.000027 | 0.000008 | 0.000001 |
| $B_{I}^{3}(x)$ | 0.000001 | 0.000008 | 0.000027 | 0.000064 |
| $\sqrt[3]{B_{N}(x)}$ | 0.144225 | 0.125992 | 00.125992 | 0.1 |

Table 6.2

Then we have

$$
E_{(3,3, \sqrt[3]{ })}(A)=0.496409, E_{(3,3, \sqrt[3]{ })}(B)=0.566444 .
$$

Thus $C_{(3,3, \sqrt[3]{-})}(\bar{A}, \bar{B})=0.0711$. So we have

$$
\begin{gather*}
\kappa_{(3,3, \sqrt[3]{ })}(\bar{A}, \bar{B})=0.053306  \tag{6.2}\\
\kappa(\bar{A}, \bar{B})=0.09451 \tag{6.3}
\end{gather*}
$$

Hence from (6.2) and (6.3), we see that (3,3, 绕)-PFSs $\bar{A}$ and $\bar{B}$ are not correlated.

## 7. Conclusions

We discussed some properties of $(3,3, \sqrt[3]{)})$-PFBCCIs of $B C C$-algebras. The image and the pre-image of $(3,3, \sqrt[3]{\cdot})$-PFBCCIs of $B C C$-algebras under a homomorphism of $B C C$-algebras were defined and how the image and the pre-image of $(3,3, \sqrt[3]{\cdot})$ PFBCCIs of $B C C$-algebras become a $(3,3, \sqrt[3]{)})$ )-PFBCCI were studied. Moreover, the product of $(3,3, \sqrt[3]{)})$ )-PFBCCIs was established. Finally, we introduced the concept of correlations for $(3,3, \sqrt[3]{\cdot})$-PFSs, which is a new extension of the correlation of Atanassov's IFSs and investigated its some properties. The main purpose of our future work is to investigate $(3,3, \sqrt[3]{\cdot})$ )-picture fuzzy topologies and $(3,3, \sqrt[3]{\cdot})$ )- picture fuzzy m - polar of $B C C$-ideals of $B C C$-algebras.

Acknowledgements. The authors greatly appreciate the referees for their valuable comments and suggestions for improving the paper.
